EDUCATION

Computer Engineering

Balıkesir Üniversitesi | 2020 - 2024

Computer Programming

Çanakkale 18 Mart Üniversitesi 2016 - 2018

PARTICIPATIONS

TÜBİTAK 2209 -B

Live Animal Detection with UAV

Tusaş Lift Up

Live animal detection with UAV – Success

Teknofest 2023

Unmanned Ground Vehicle in Agriculture – Semi-Final

ABOUT ME

I'm a computer engineer with a passion for developing technological solutions. Since 2015, I've specialized in automation, embedded systems, IoT, and artificial intelligence projects. I develop innovative, scalable solutions by integrating hardware and software. I lead industrial projects in embedded systems, machine learning, and mobile software.

EXPERIENCES

Embedded System Engineer

IOTROCOP Teknoloji

2024 - 2025

- Embedded software solutions (C/C++)
- Full Stack development
- Project process management
- STM, ESP32, Quectel processors

Information and Hardware Technician

MES-TEK Teknoloji

2020-2023

- Customer-based software solutions (ERP, Module, Web, Mobile)
- Network design, maintenance, and repair
- Computer and peripheral component maintenance, repair, and assembly
- Camera and security systems installation
- Project design, development, and implementation

Game Developer

Ntroy

2016-2017

- Game idea generation and design
- Game mechanics, user interface, and visual design
- Coding, testing, and debugging
- Project process management

PROJECTS

Embedded Systems and IoT Solutions

I developed specialized IoT solutions that enable data communication and processing between devices (in-cage tracking, parking, and vehicle tracking systems).

TUSAŞ and TÜBİTAK 2209-B

Support from TÜBİTAK was obtained through the Lift Up project. I served as the project manager for a real-time animal tracking system project on a UAV camera. I led the development of a system that allows operators to easily track animals by processing their GPS data, UAV telemetry, and camera images.

Teknofest 2023

OtoKümes Project: As the project manager, I worked on chicken coop automation, mobile robots, and mobile application integration.

IDA Project: I contributed to image processing and underwater robot control systems.

Web and Mobile Applications

I developed user-based applications. I participated in various Hackathons, seminars, and bootcamps. I engaged in Web 2.0 and 3.0 projects.
